Cookeville, TN

EDUCATION

Tennessee Technological University (Expected Graduation: May 2028)
Bachelor of Science in Computer Science, Information Assurance and Cybersecurity Concentration
• **GPA: 3.79**

WORK EXPERIENCE

Averitt Express (Sep 2026 – Present)

Part-Time Tech Support Associate

- Provide technical support to internal associates by handling inbound service requests and troubleshooting reported issues.
- Perform daily and weekly backups, scheduled server reboots, and system checks.
- Complete Initial Program Load (IPL) procedures and operational checklists for critical systems.
- Use Active Directory to support routine user account and access-related troubleshooting.

Tennessee Tech Defensive Cyber Interest Group (Aug 2026 – Present)

Co-Lead

- Plan and lead entry level meetings, hosting up to 40 students, introducing new members to defensive cybersecurity concepts and practices.
- Teach networking, Windows and Linux fundamentals, system hardening, service security, and scripting through demonstrations and guided exercises.
- Develop meeting materials and hands on activities that help members build practical system administration, troubleshooting, and defensive security skills.

Brian Waggoner MD (Feb 2024 – Present)

Office Cleaner

- Maintain a clean, sanitary, and organized medical office by completing assigned responsibilities on a consistent schedule.

CERTIFICATIONS

Zero-Point Security Ltd - Red Team Operator (Jan 2026)

- Completed hands-on Active Directory adversary simulation training using Cobalt Strike, covering command-and-control operations, credential access, lateral movement, privilege escalation, and operational security.

GIAC Foundational Cybersecurity Technologies (Sep 2023)

- Validated foundational skills in networking, cryptography, Windows and Linux administration, programming, incident response, and cybersecurity fundamentals.

CompTIA ITF+ (May 2022)

- Validated foundational knowledge of hardware, software, networking, security, and technical troubleshooting.

ON CAMPUS INVOLVEMENT

CyberEagles Club (Aug 2025 – Present)

Officer and Engineering Student Council Representative

- Represent CyberEagles at Engineering Student Council meetings, communicate the organization's interests, and relay council updates to club leadership.
- Assist with planning and delivering club meetings, including creating presentations and instructional material on cybersecurity topics.

SKILLS

- Cybersecurity & Adversary Emulation Tools: Mythic C2, Cobalt Strike, Wireshark, Hashcat, Nmap, Autopsy, Sysinternals Suite, Ghidra
- Scripting/Programming Languages: Python, PowerShell, HTML, CSS, JavaScript.
- Operating Systems: Windows, Windows Server, Debian-based Linux, Arch-based Linux.
- Virtualization Software: VMware ESXi, Proxmox.
- Source Control: Git, GitHub.

PROJECTS

Tomoe – Cross-Platform Windows Administration Tool

- Co-developed a Python utility for remotely administering Windows and Linux systems through WinRM, SMB, and SSH.
- Implemented multi-threaded credential testing and command execution across multiple hosts simultaneously
- Created recursive file transfer functionality supporting individual files and directory structures across both protocols
- <https://github.com/carterleehaney/Tomoe>

Cybersecurity Homelab

- Deployed a segmented network using OPNsense across three interfaces (WAN, LAN, OPT1), restricting WAN access exclusively to the Proxmox management interface and isolating lab environments in OPT1 from core infrastructure.
- Implemented Zero Trust security model using Keycloak SSO and Cloudflare Zero Trust application policies to protect Proxmox web interface and Apache Guacamole, accessible only to authenticated users via secure cloudflare tunnels.
- Developed an Infrastructure as Code solution using Terraform to automate deployment of Ubuntu and Kali jumpbox templates, automatically provisioning Keycloak user accounts and Guacamole connection profiles for seamless user access.
- Designed a scalable lab environment with plans to automate VLAN provisioning through Terraform and develop bash-based management scripts for streamlined infrastructure administration.
- Administered multiple Proxmox hosts supporting isolated Windows and Linux environments for cybersecurity testing, competitions, and technical training.

COMPETITION EXPERIENCE

Collegiate Cyber Defense Competition

(Feb 2026 – Apr 2026)

- Placed 1st in SECCDC Qualifiers and 2nd in SECCDC Regionals.
- Secured and maintained Windows Server infrastructure while defending against an active red team.
- Developed scripts to automate hardening, firewall configuration, and management of Windows systems.
- Investigated suspicious activity and coordinated rapid remediation while maintaining the availability of scored business services.

Collegiate Penetration Testing Competition

(Oct 2025 – Jan 2026)

- Performed reconnaissance and vulnerability analysis against Windows systems in team practice environments.
- Organized training meetings and configured exercises to improve team readiness.
- Prepared technical and executive documentation describing security findings, business impact, and remediation recommendations.

Department of Energy CyberForce Competition

(Nov 2025)

- Placed 3rd nationally out of 96 teams in an 8 hour Defensive and Capture the Flag Challenge.
- Worked within a team to defend a network of 6 Windows and Linux Virtual Machines simulating an oil rig, placing 1st in defense.
- Solved Anomalies (CTF challenges) relating to malware analysis, forensics, energy, log analysis, cryptography, and stenography.

eCitadel

(May 2025)

- Finished 9th in a cyber defense exercise simulating a live commercial network environment.
- Defended critical services (AD, Database, and e-commerce servers) against a live simulated Red Team, applying real-time hardening and patching to maintain operational availability and functionality.

National Cyber League

(Jan 2025 – May 2026)

- Earned a Diamond ranking in the Fall 2025 Team Game, placing in the 98th percentile overall and 16th out of 454 teams.
- Placed in the 90th percentile overall in the Spring 2025 Individual Game.
- Solved challenges involving open-source intelligence, cryptography, password cracking, log analysis, network traffic analysis, and digital forensics.

CyberPatriot

(Apr 2024 – Mar 2025)

- Achieved 1st Place in Tennessee by successfully defending multiple systems against known vulnerabilities.
- Hardened Windows 10/11 Pro and Windows Server 2019/2022 environments by configuring security policies, managing user permissions, and removing malware under time-sensitive conditions.
- Engineered a PowerShell script to automate the auditing of local and Active Directory user accounts, significantly reducing the time to identify and flag unauthorized credentials.
